DRIVER'S HANDBOOK · MODEL DR-48

DRIFT 5.2.10

STREET LEGAL
MODEL DR-48

Carve a band. Drive it hot. Let it race.

Pick a slice of your sound, push it through saturation and five effects, then hand it the wheel: a car lapping a real race circuit steers your pan. Built as the last stop for a vocal.

01 THE DRIVETRAIN

Band window → Gain → Drive → FX (your order) → Band mix → Pan / race → + the rest → Glue

Everything outside the band stays untouched. GLUE COMP sits last by default and squeezes the whole output; slide it in among the other effects and it works on the band only.

02 BOLT IT IN & ACTIVATE

- **VST3, AU & AAX**, macOS & Windows 64-bit. Run the installer, then **Rescan** plug-ins in your DAW.
- **Size:** the % dropdown (50 / 75 / 100 %) or drag the corner grip.
- **30-day trial** from first launch, no key needed.
- **Activate:** click ⓘ (top-right of the dash) and paste your key. One key, two computers.

03 THE DASH

Low Cut · High Cut 20 Hz … 20 kHz	Drag the lines on BAND SELECT to window the band; click the plot to snap the nearest line, double-tap one to reset it. **SOLO** plays only the band and its effects.
Gain · Mix	The band's level (up to +6 dB, double-click = 0 dB) and its parallel blend against the clean band.
Route STEREO · MID · SIDE	Work on the whole image, the centre only, or the edges only. The stereo imager shows the field live.
Drive · Engine	DRIVE feeds the saturator (the TEMP gauge heats up; the dome bypasses it). **TAPE** warm · **TUBE** bright bite · **XFMR** bass rounds first · **DIGITAL** bit-crush.
Quality 2× … 32× · OFF	Oversampling for the drive. 4× default; OFF = zero latency, aliasing left in.
Pan (the wheel)	Steers **your band**; the rest stays put. Double-click to centre.

04 THE RACE

Click the mini GPS screen (bottom-right) to open **TRACKS**: 24 calendar circuits, 16 legends and 8 SIMPLE shapes (BREEZE to TORNADO). A car laps the circuit and its position is your band's pan: straights sweep, hairpins snap.

Intensity	How hard the driver pushes: wider pan, harder braking, the tail sliding out of corners.
Speed FREE · SYNC	Seconds per lap, or locked to your tempo at 1–32 bars per lap.
Play · Pause · Stop	Start or resume · freeze the car and park the pan · end the race and ease back to centre.
Auto Drift THRESH · ATTACK · RELEASE	The race speed follows your audio: loud = full throttle, silence = the car stops and the pan rests in the centre. Needs a track running.

05 THE FX VIEW

Open it with the round **FX** button (Esc or the red X returns). Drag a strip's carriage to reorder; each strip has a power LED and its own MIX. **FX MIX** scales them all, **ON / OFF** bypasses the rack. **RANDOMIZE** rolls echo, reverb, halo, pitch and the order (never GLUE), the **DICE LOG** keeps the last 8 rolls, and **SNAPSHOT A–D** store a rack (hold) and recall it (click).

Reverb	ROOM / PLATE / HALL · SYNC / FREE · DECAY · BRIGHT · PREDLY · SHIMMER · DUCK · MIX.
Echo	SYNC / FREE · TIME · FEEDBK · P-PONG · WIDTH · CHARAC (VINTAGE → MODERN) · WOBBLE · DUCK · MIX (past 50 % the dry fades).
Halo	A wide ensemble around the voice; the voice stays centred. MODE 1–4 · SIZE · TONE · MIX.
Pitch	PITCH ±12 st (moves the band) · FORMANT ±12 st · MIX. Both at 0 = engine out.
Glue Comp	RATIO 2:1 / 4:1 / 10:1 · ATTACK · RELEASE (+ AUTO) · THRESH · MAKEUP · MIX · SOFT · SC HPF. Off until you light it.

06 THE GLOVEBOX

61 factory presets in six groups: **Vocal** 11 · **Keys** 10 · **Guitar** 10 · **Drums** 10 · **Bass** 10 · **Mix bus** 10, plus a neutral **Default**. DRIFT opens on **Green Flag**, the go-to vocal finish. Good starts: **Late Apex Vocal** (AUTO DRIFT), **Marina Bay** (glue), **Imola Throttle** (halo). ◄ ► to page, * = edited, SAVE banks your own. **Cmd/Ctrl+Z** undo, **+Shift** redo.

07 VOCAL TO FINISHED IN THREE

1. **Carve it.** SOLO and set the band, e.g. just the air on top (LOW CUT around 3–4 kHz).
2. **Pick a circuit, turn on AUTO DRIFT.** It moves while the singer sings and parks in the gaps.
3. **Open the trunk.** A little HALO, ducked echo / reverb, then light GLUE COMP.
