DRIVER'S HANDBOOK · MODEL RR-100

Radio Roulette 1.10.1

FACTORY TUNED
MODEL RR-100

Scan the dial. Never the same station twice.

Ten effects, one seed. Turn the dial and the whole chain — filter, drive, pitch, time, and space — redraws itself as a fresh, reproducible station. Save the seed, recall the exact sound.

Station 788129 — Fade Short, OS 1×, Mix at 50.

EFFECTS	STATION	OVERSAMPLE	FORMATS	TRIAL
10	0–1,000,000	1×–32×	VST3 · AU · AAX	14 days

01 WHAT'S UNDER THE HOOD

Ten-stage chaos

THE ENGINE BAY

Filter, EQ, fuzz, pitch, chorus, delay, reverb, gate, stereo, and pan — all re-randomized together on every turn.

Station Select

THE DIAL

Tune draws a new seed — a pure function of its number, so the exact same station always comes back.

Mix

THE CROSSFADE

Global dry/wet blend between the untouched signal and the full chaos chain.

Oversample

REDLINE-CLEAN

1× to 32× keeps the wildest seeds alias-free; 1× stock, dial up for the final render.

02 THE ENGINE BAY

Filter → EQ → Fuzz → Pitch → Chorus → Delay → Reverb → Gate → Stereo → Pan

03 BOLT IT IN & ACTIVATE

- **Format:** VST3, AU & AAX, macOS & Windows 64-bit.
- **Install:** run the installer, or drop the plug-in into **Common Files\VST3** (Win) or **/Library/Audio/Plug-Ins/VST3/** (Mac) — AU and AAX land in their matching system folders automatically.
- **Find it:** in your DAW, **Preferences → Plug-Ins → Rescan**.
- **Activate:** paste your license key from the purchase email into the info panel.
- **Trial:** a 14-day trial starts automatically on first launch — no key needed to explore. Until activated, audio passes through unprocessed.

04 THE COCKPIT

Mix 0 … 100 %	Global dry/wet blend between clean signal and the full chaos chain.
Station 0 … 1,000,000	Every station is a fixed seed. Write a value — or save it in your DAW — to recall the exact sound.
Power On / Off	True bypass toggle — kill the chain, keep the plugin loaded.
Oversample 1× … 32×	Redline-clean aliasing control on the hottest seeds; 1× stock, dial up for the final render.
Fade Short / Medium / Long	Declick ramp used whenever the station changes or a stage mutes. Short stays snappy; Long glides through automation sweeps.

05 SCAN TO CHAOS IN THREE

1. **Hit the dial.** Turn Tune or press Station Select — a fresh seed draws instantly, all ten stages re-randomized together.
2. **Blend it in.** Ride Mix between clean and full chaos — every seed is safety-limited, never a blowout.
3. **Keep the keeper.** Found a station you love? Write down its Station number — same seed, same sound, forever.

> **PIT-CREW TIP** Every seed is level-matched and safety-limited on its own. If a station's too wild, ride Mix down before you go hunting a calmer one — chaos should never mean clipping.

06 MUTE LAMPS

Filter | EQ | Fuzz | Pitch | Chorus | Delay | Reverb | Gate | Stereo | Pan

- Click any stage's lamp on the dial glass to **mute it solo** — the lamp goes dark and that effect drops out of the chain instantly, without touching the rest.
- The **Fade** control (Short / Medium / Long, see The Cockpit) sets the declick ramp used whenever a lamp toggles or the station changes — pick Long for click-free automation sweeps.

07 FAVOURITES

Save a station

★ ADD TO FAVOURITES

Found a keeper? Name it and it's saved to the Favourites list — recall it with one click, any time.

Local to this machine

NOT PART OF THE SESSION

Favourites live in this computer's plugin storage, not the DAW project — they follow the machine, not the session file.

08 STAR IT, NAME IT, RECALL IT

1. **Find a keeper.** Dial into a station worth keeping, then open the Favourites list at top-left of the dial.
2. **Name it.** Press ★ Add to favourites, type a name, hit Enter — it's saved instantly, no extra step.
3. **Recall it.** Click the saved name any time to jump straight back to that exact station — or tap its ✕ to remove it.

> **PIT-CREW TIP** Favourites recall the exact Station number, same as tuning the dial by hand. They live on this machine only — if you switch computers, note down the Station numbers you want to keep.
