DRIVER'S HANDBOOK · MODEL GAS-1

GAS 1.0

FACTORY TUNED
MODEL GAS-1

One knob. Three engines of burn.

Twist DRIVE and every stage — gain, tone, and dynamics — moves together as one macro. Pick your engine: warm Tube, squashing Tape, or biased Fuzz. Character changes. Loudness doesn't.

Idling at 35% drive — TUBE selected, check-engine lamp dark.

THROTTLE	ENGINES	DRIVE GAIN	OVERSAMPLE	FORMATS
DRIVE	3	UP TO +36 DB	UP TO 8×	VST3 · AU

01 WHAT'S UNDER THE HOOD

ONE-KNOB MACRO

THE THROTTLE

DRIVE stages gain, tone, and dynamics together — one turn changes character, never loudness.

THREE ENGINES

TUBE · TAPE · FUZZ

Warm even-harmonic tube, squashing tape with gap-loss, or biased fuzz with dying-battery sag.

CALIBRATED LOUDNESS

NO CHEATING

Static calibrated compensation, not a live auto-gain loop — deterministic, honest, zero pumping.

CHECK-ENGINE LAMP

THE TRUTH GAUGE

Reads actual distortion, not knob position — lights at real heat, not just a high number.

02 THE SIGNAL PATH

Input → Pre-EQ → Drive gain → Oversample → **Shaper** → Post-EQ → Output

03 BOLT IT IN

- **Format:** VST3 + AU, macOS & Windows 64-bit. Standalone included for quick auditions.
- **Install:** drop **GAS.vst3** into **Common Files\VST3** (Win) or **~/Library/Audio/Plug-Ins/VST3/** (Mac).
- **Find it:** in your DAW, **Preferences → Plug-Ins → Rescan**.
- **The panel:** fixed-size by design — one knob doesn't need room to grow.

04 THE COCKPIT

Drive 0 … 100 %	The pedal. Stages gain, tone and dynamics in one turn — more knob means more character, not more level.
Voice Tube / Tape / Fuzz	Tube = warm, even-harmonic glow. Tape = squash + gap-loss darkening. Fuzz = biased, dying-battery snarl.
Output Trim ±12 dB · automation	Trim after the tank — automation-only, not a face knob by design.
Mix 0 … 100 % · automation	Dry/wet blend; 100% wet out of the box.
Quality Eco / HQ	Eco halves the oversampling for older rigs. HQ is the full-strength burn.

05 THREE TURNS TO TONE

1. **Pick your engine.** Tap Tube, Tape, or Fuzz — each is a different personality, not a different loudness.
2. **Turn the pedal.** Push Drive for more grit; calibrated gain keeps level honest as you go.
3. **Watch the lamp.** Check-engine glows at real heat — past that you're not driving, you're smoking the clutch.

> **PIT-CREW TIP** Mix and Output Trim are automation-only by design — the face keeps just the one knob that matters. Automate them from your DAW when you need to ride the blend.
